

Daily Site Audit Report

Project: Kryosync.netlify.app

Date: June 1, 2026

Intern name: Chudasama Maheshvari

Platform: Netlify (Static Site)

Morning TASK

Executive Summary

The site is currently live with a ****Performance Score of 88/100**** and a ****Best Practices Score of 100/100****. While the code structure is generally sound, significant HTML errors were detected by the validator, and large payload sizes are dragging down the loading speed. Immediate fixes are required for image paths and DOM nesting to ensure cross-browser compatibility and SEO health.

Status Overview

Category	Score	Status
:---	:---:	:---
Performance	88	 Needs Improvement
Accessibility	96	 Good
Best Practices	100	 Excellent
SEO	90	 Good

Performance Diagnostics

Target: Pass Core Web Vitals

1. Core Web Vitals (Mobile - Slow 4G)

First Contentful Paint (FCP): 2.6s (Target: <1.8s)

Speed Index (SI): 5.3s (Target: <3.4s)

Largest Contentful Paint (LCP): 2.7s (Target: <2.5s)

Total Blocking Time (TBT): 0ms 

2. Key Bottlenecks

Render-blocking Resources: Saving 1,780ms is possible by deferring CSS/JS.

Huge Network Payload: The total page size is 5,345 KiB (~5.3 MB). This is extremely heavy for a mobile connection.

Action:* Compress images (convert to WebP), remove unused code.

🐞 HTML & Code Quality Issues

Source: Nu Html Checker (vnu 26.6.1)

Critical Errors (Must Fix)

1. ****Illegal Characters in Paths:****
 - * `images/submark logo.png` contains a space.
 - * `images/web dev.jpg` and `images/app dev.jpg` contain spaces.
 - * ***Fix:** Rename files to `submark-logo.png` or use URL encoding `%20`.
2. ****Invalid Nesting:****
 - * `` cannot appear inside `` (Lines 113, 116).
 - * ***Fix:** Use standard anchor tags `` styled as buttons, or strictly separate elements.
3. ****Syntax Error:****
 - * Missing space between attributes at Line 188: `tech-label"id` should be `tech-label id`.
4. ****Structure Errors:****
 - * Unclosed `

` and `

` tags detected.
 - * Duplicate ID `mainFooter` used twice.

Structure & SEO Warnings

1. ****Heading Levels Skipped:****
 - * Document jumps from `

` directly to ``.
 - * ***Fix:** Ensure headings follow logical order: `

` -> `` -> ``.
2. ****Missing Meta Description:****
 - * SEO check flagged a missing meta description for search engines.

The Big Picture

Think of your website like a store. Right now, people can walk in, but maybe the door is a bit heavy, or the sign outside isn't as clear as it could be. That's what these numbers tell us.

- Performance (88/100): Good, but that 4G connection your users might be on? It's making them wait a bit too long.
- Accessibility (96/100): Awesome job here! Most people will have no trouble using your site.
- SEO (90/100): Pretty good! Google will find you, but we can make it easier.
- Best Practices (100/100): Clean code choices — love it!

What's Slowing Things Down

Here's the thing — your site is 5.3 MB. That's like asking someone to download a small movie just to see your homepage. On fast WiFi, that's fine. But on mobile data? Yikes.

What's contributing to the size:

- Those beautiful images on your site? They're not compressed. Huge files take forever to load.
- Render-blocking resources are like having a bouncer check everyone's ID before letting them in the door. It slows things down.

What your users actually feel:

- They see the first content appear after 2.6 seconds. (Ideally, we'd want under 1.8s)
- The main content shows up at 2.7 seconds. (We could aim for under 2.5s)

The HTML Stuff (The Nitty Gritty)

Okay, so the code has a few boo-boos. Don't worry — these are easy fixes!

Things we need to fix right away:

1. Image file names with spaces

Your images are named things like `web dev.jpg`. The computer sees that space and gets confused.

Think of it like this: If someone's address had "Space" in it, the mailman would get lost too!

2. Buttons inside links

You have `<button>` tags sitting inside `<a>` tags. That's a no-no — it's like having two doors in one doorframe. The browser doesn't know which one to use.

3. Some tags left open

A few `<div>` and `<section>` tags weren't closed properly. This doesn't break the site, but it can make things look weird on some devices.

Small things to improve:

- **Heading levels:** You jump from `<h1>` to `<h3>`. Missing the `<h2>`? It's like skipping a step on a staircase.
- **No meta description:** This is the little summary that shows up on Google. Right now, it's empty.

Everyone Can Use It — Almost!

Great news: your site is 96% accessible. That's really good! Most users will have no problems at all.

The one thing missing:

- A `<main>` tag. Think of it like a book without a main chapter. The reader knows the story, but it's harder to navigate.

Let's Make It Better

Here's what I'd suggest tackling today:

Quick Fixes (5 minutes)

1. Rename those image files: `web dev.jpg` → `web-dev.jpg`
2. Fix that button inside link issue
3. Add a space in line 188 where it says `tech-label id` → `tech-label id`

When You Have Time (30 minutes)

1. Smush those images! Use WebP format — it's way smaller and looks just as good.
2. Add "defer" to your JavaScript so it loads after the page shows up.
3. Add a meta description so Google knows what to say about you.
4. Add a `<main>` tag around your main content.

In Short

What's Good ✨	What Needs Love 💕
Best practices are perfect	Heavy images (5.3 MB)
Accessibility is great	Google can't describe you yet
Clean code structure	A few HTML typos
Solid SEO foundation	Some render-blocking stuff

Bottom Line

Your site is in pretty good shape! Those scores (88, 96, 90, 100) prove you've put in solid work. A few quick fixes will take it from "nice" to "amazing."

Let's crush those image sizes, fix those tiny HTML errors, and you'll be looking at a 95+ performance score in no time.

Want me to walk you through any of these fixes? Happy to help! 🚀

TASK 2

Digital marketing task

Research a Brand's Digital Presence

Create 5 Social Media Post Ideas

Design 2 Posters using Canva

Competitor Analysis Report

make it shoure that it will be an humanised

Digital Marketing Task Deliverable

The brand I chose is Nike

I chose Nike because it is a brand with a strong presence online and great examples of marketing that feels real. The way Nike connects with people is genuine and inspiring which makes them perfect for studying how to do marketing well.

1. Research on Nikes Digital Presence

Platform Presence

Instagram: 224 million followers

This is the place where Nike tells stories with pictures

It is a mix of athletes and regular people who love sports

Nike does a great job of using content made by users

They also make fun short videos with workout tips

Twitter/X: 13.9 million followers

This is where Nike talks to people in real time about sports

Nike sends short and catchy messages

They also help customers and manage the community

YouTube: 2.4 million subscribers

Nike makes documentary-style films about the brand ("Dream Crazy")

They also make videos that teach people how to work out and interview athletes

TikTok: 3.1 million followers

This is where Nike makes fun and trendy content

They also make videos and partner with people who are into fitness

Facebook: 15.5 million followers

This is where Nike builds a community

They promote events and make longer videos

Analysis of Nikes Content Strategy

Nikes online content is great because they do not just sell shoes. They sell the idea of being strong and determined. Their content always talks about

stories of people overcoming obstacles

Celebrating athletes from different backgrounds

Inspiring people to move and take action

Getting people to talk to each other

Characteristics of Nikes Voice

Nikes voice is empowering and inclusive. They are not afraid to talk about issues, which makes them feel like a brand that cares, not just a company selling products. The language they use is conversational and motivational. Never sounds too corporate or salesy.

2. Five Ideas for Social Media Posts

Post Idea #1: "Your Shoes Have Stories"

Concept:

Make a post with pictures of customers wearing their old Nikes and tell the story of where they have been. Feature 5-6 photos from customers with a brief story about a meaningful memory attached to them.

Caption:

"These shoes do not just walk. They remember.

Tag someone whose Nikes have stories to tell. We want to hear them.

#YourNikeStory"

Why this works:

This feels real because it is about the customers, not the brand. It makes the product and the people wearing it feel real.

Post Idea #2: "3 AM Training Club"

Concept:

Make a video showing the moments before dawn. A runner getting ready someone going to the gym the sound of early morning streets. No music, the sounds of the morning.

Caption:

"The alarm does not lie to you. The mirror does not judge you. The 3 AM gym does not ask questions.

You are not early. You are on your time.

Drop a if you are up before the sun today."

Why this works:

_This talks directly to the athletes who get up early and understand the work. It creates a feeling of being part of a group without being exclusive.

Post Idea #3: "Parent-Child Workout Challenge"

Concept:

Make a fun video of a parent teaching their simple exercises. Maybe a kid trying to do pushups while the parent cheers them on or both trying to do yoga poses together. Keep it funny and real.

Caption:

"Teaching your kids that trying is more important than winning.

Today's workout: Dad vs. 7-Year-old in pushup contest. Results are... Complicated.

Share a video of you working out with your kid. Let's see those moves!"

Why this works:

This pulls at heartstrings while promoting fitness for families. It makes exercise feel like fun family time, not punishment.

Post Idea #4: " Helpful Running Tips"

Concept:

Instead of posting pictures of famous athletes post a really useful infographic about how to run properly how to breathe or how to prevent injuries. Make it look clean and easy to save.

Caption:

"Running does not have to hurt.

Here are 5 things that are actually worth knowing before your run

Save this for your next 5K. Your future self will thank you."

this worksWhy :

This provides value without asking for anything in return. It is like having a friend, not a corporation.

Post Idea #5: " Talk: Rest Days"

Concept:

Make a honest post talking about the importance of rest. Not just physical rest, but also mental breaks. Feature an regular athlete talking about why they took a break and how it made them stronger.

Caption:

"Rest is not quitting. It is remembering who you are outside the workout.

Sometimes the hardest thing to do is stop. We have been there.

Your rest day is approved."

Why this works:

_It breaks the idea that you have to work out every day and shows that Nike understands that fitness is not, about the body but also the mind. This kind of content builds trust.

4. Competitor Analysis Report

Main Competitors: Nike vs. Adidas vs. Puma

Aspect

- * Nike

- * Adidas

- * Puma

Global Followers

- * 224M (IG)

- * 21M (IG)

- * 15M (IG)

Brand Tone

- * Nike is bold and aspirational. Sometimes controversial.

- * Adidas is inclusive and community-focused with a tone.

- * Puma is playful and edgy with a youth-oriented tone.

Content Style

- * Nike uses style and emotional storytelling.

- * Adidas focuses on products, lifestyle and sports entertainment.

- * Puma is trendy, meme-friendly and celebrity-driven.

Posting Frequency

- * Nike posts daily on platforms.
- * Adidas posts times daily.
- * Puma posts with culturally relevant content.

Engagement Strategy

- * Nike partners with athletes. Uses cause marketing.
- * Adidas sponsors. Collaborates with music artists.
- * Puma works with celebrity ambassadors and gaming partners.

Strengths & Weaknesses Analysis

Nike

Strengths

- * Nike has brand recognition globally.
- * Nike tells emotional stories.
- * Nike innovates digitally with the Nike Training Club app and SNKRS.
- * Nike takes risks with messaging.

Weaknesses

- * Nike can feel corporate at times.
- * Nikes premium pricing excludes some audiences.
- * Some people criticize Nikes labor practices. Want more transparency.

Adidas

Strengths

- * Adidas has a presence in the European market.

- * Adidas collaborates well with streetwear brands like Yeezy and Ivy Park.

- * Adidas balances sport and lifestyle content well.

Weaknesses

- * Adidas is slower to innovate compared to Nike.

- * Adidas storytelling is less emotional.

- * Adidas depends on collaborations for buzz.

Puma

Strengths

- * Puma has a social media engagement ratio.

- * Puma partners with celebrities in a way.

- * Puma has a pricing strategy for entry-level athletes.

Weaknesses

- * Puma has a global reach.

- * Puma innovates less in training content.

- * Pumas brand identity feels less defined than its competitors.

Key Takeaways for Digital Strategy

- * Authenticity is key. Nikes successful posts are real stories, not polished ads.

- * Building a community is more important than making sales.

- * Being consistent with visuals helps.

- * Adapting content for each platform is crucial.

- * Taking stands on issues, when authentic creates deeper connections.

Final Thoughts

I learned a lot from this marketing task for Nike. It's not about being perfect; it's about being present, genuine and connected. Great digital marketing comes from understanding people with real needs.

This assignment showed me the difference between social media and humanized social media. The brands that succeed aren't the ones, with the budgets; they're the ones who understand their audience and speak to them like real people.
